

# Light Emitting Diode

## ARL-3528xW

### Features

- PLCC-2 Package.
- Extremely wide viewing angle.
- Suitable for all SMT assembly and solder process.
- Available on tape and reel.
- Moisture sensitivity level: Level 4.
- Package: 2000pcs/reel..
- RoHS compliant.

### Description

The White LED which was fabricated using a blue chip and the phosphor

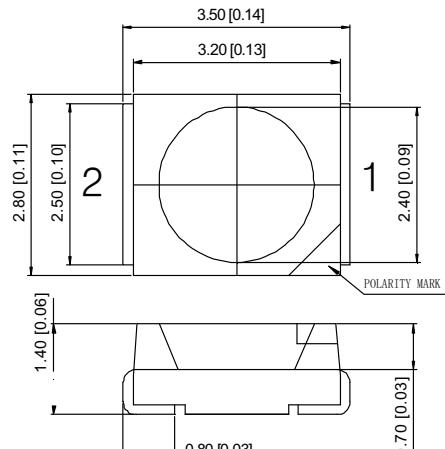

**ATTENTION**  
OBSERVE PRECAUTIONS  
FOR HANDLING  
ELECTROSTATIC  
DISCHARGE  
SENSITIVE

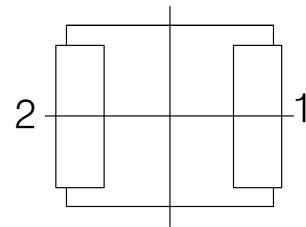

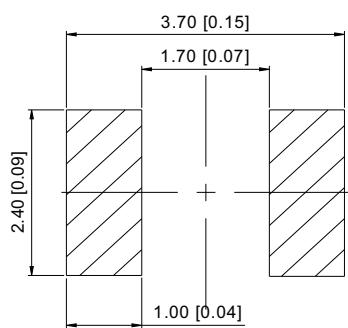

### Applications

- Optical indicator
- Indoor display
- Automotive lighting
- Backlight for LCD, switch and Symbol, display
- Tubular light application
- General use

### Package Dimensions

### Recommended Soldering Pattern

2 → 1

Notes:

1. All dimension units are millimeters.

2. All dimension tolerance is  $\pm 0.15$ mm unless otherwise noted.

# ARL-3528xW

## Selection Guide

Part No.	Chip Materials	Lens Type
ARL-3528xW	InGaN	Yellow Diffused

## Mass Production list

Part No.	CCT (K) Min	CCT (K) Typ	CCT (K) Max	Φ (lm) Min	Φ (lm) Typ	Test Condi-tions
ARL-3528UW	5700	6000	6500	7.0	7.5	IF=20mA
ARL-3528NW	4750	5000	5300	7.0	7.5	IF=20mA
ARL-3528DW	3800	4000	4250	7.0	7.5	IF=20mA
ARL-3528WW	2800	3000	3100	6.8	7.0	IF=20mA

## Electrical / Optical Characteristics at Ta=25°C

Parameter	Symbol	Min.	Typ.	Max.	Units	Test Conditions
Forward Voltage	VF	2.8	--	3.4	V	IF=20mA
Viewing Angle	2θ1/2	--	120	--	Deg	IF=20mA
Color Rendering Index	Ra	70	--	--		IF=20mA
Reverse Current	IR	--	--	10	µA	VR = 5V

### Note:

1. θ1/2 is the angle from optical centerline where the luminous intensity is 1/2 the optical centerline value.
2. the above luminous flux measurement allowance tolerance ±10%.
3. the above Color Rendering Index measurement allowance tolerance : ±2
4. The above forward voltage measurement allowance tolerance is ±0.1V.
5. The above color coordinates measurement allowance tolerance is ±0.003.

**ARL-3528xW****Absolute Maximum Ratings at Ta=25°C**

Parameter	Symbol	Rating	Units
Power Dissipation	Pd	100	mW
Forward Current	IF	30	mA
Peak Forward Current [1]	IPF	100	mA
Reverse Voltage	VR	5	V
Electrostatic Discharge (HBM)	ESD	1000	V
Operating Temperature	Topr	-40 ~ +85	°C
Storage Temperature	Tstg	-40 ~ +100	°C
Thermal Resistance (Junction / Sodering point)	Rthj-s	100	°C/W
Junction Temperature	Tj	115	°C

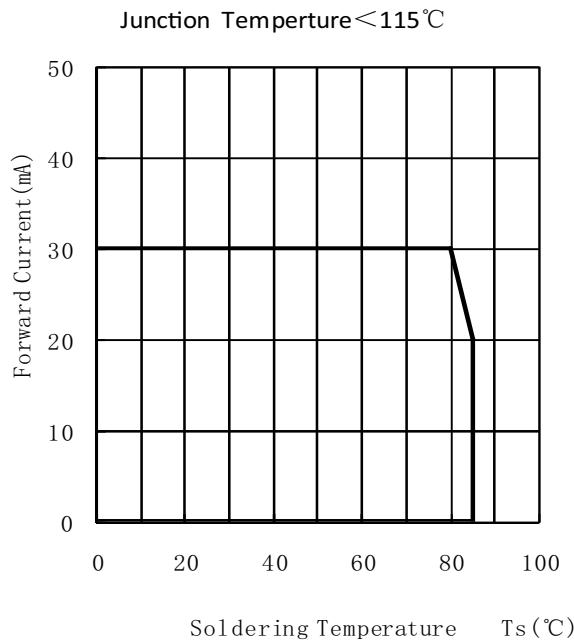

Note:

1. 1/10 Duty cycle, 0.1ms pulse width.

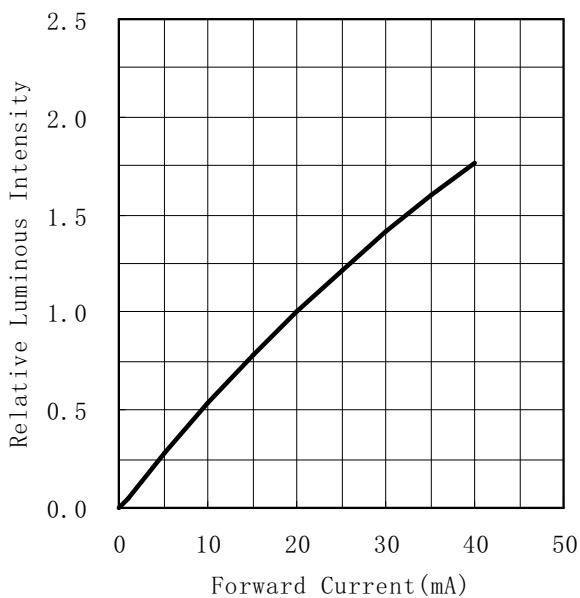

# ARL-3528xW

## SMT Reflow Soldering Instructions SMT

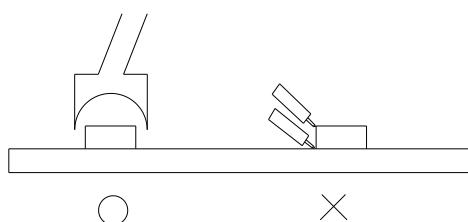

- 1.Reflow soldering should not be done more than two times.
- 2.When soldering , do not put stress on the LEDs during heating

## Soldering iron

- 1.When hand soldering, keep the temperature of iron below less 300°C less than 3 seconds
- 2.The hand solder should be done only one times

## Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or will not be damaged by repairing.

## Cautions

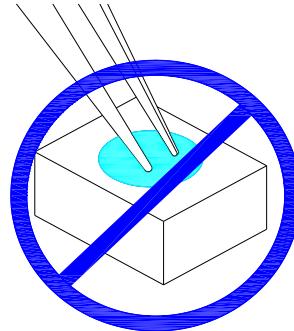

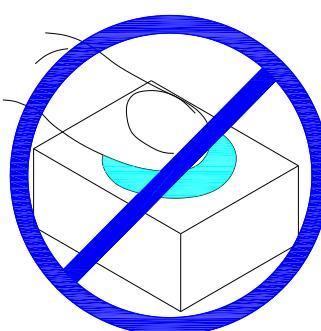

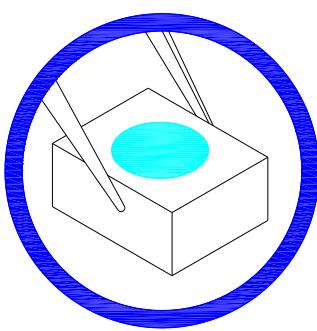

The encapsulated material of the LEDs is silicone. Therefore the LEDs have a soft surface on the top of package. The pressure to the top surface will be influence to the reliability of the LEDs. Precautions should be taken to avoid the strong pressure on the encapsulated part. So when use the picking up nozzle, the pressure on the silicone resin should be proper.

# ARL-3528xW

## Handling Precautions

Compare to epoxy encapsulant that is hard and brittle, silicone is softer and flexible. Although its characteristic significantly reduces thermal stress, it is more prone to damage by external mechanical force . As a result, Special handling precautions must be observed during assembling using silicone encapsulated LED products, Failure to comply might leads to damage and premature failure of the LED.

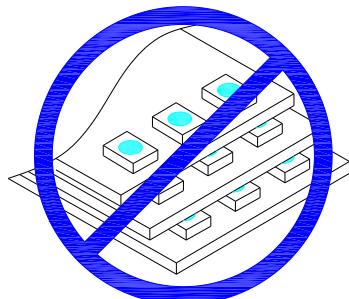

- 1.Handle the component along the side surface by using forceps or appropriate tools; do not directly touch or Handle the silicone lens surface, it may damage the internal circuitry.

- 2.The outer diameter of the SMD pickup nozzle should not exceed the size of the LED to prevent air leaks. The inner diameter of the nozzle should be as large as possible. A pliable material is suggested for the nozzle tip to avoid scratching or damaging the LED surface during pickup. The dimensions of the component must be accurately programmed in the pick-and-place machine to insure precise pickup and avoid damage during production.

- 3.Do not stack together assembled PCBs containing LEDs. Impact may scratch the silicone lens or damage the internal circuitry

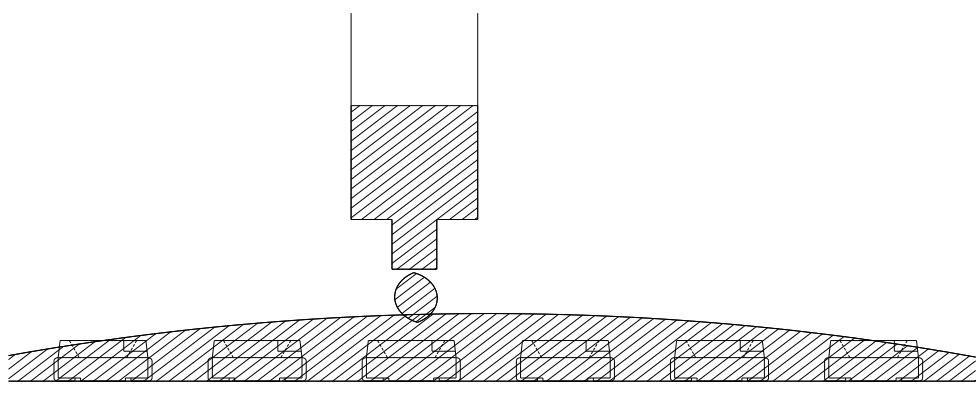

- 4.Not suitable to operate in acidic environment, PH<7

5.LED operating environment and sulfur element composition cannot be over 100PPM in the LED mating usage material.

6.When we need to use external glue for LED application products, please make sure that the external gluematches the LED packaging glue. Additionally ,as most of LED packaging glue is silica gel, and it has strong Oxygen permeability as well as strong moisture permeability; in order to prevent external material from getting into the inside of LED, which may cause the malfunction of LED, the single content of Bromine element is required to be less than 900PPM,the single content of Chlorine element is required to be less than 900PPM,the total content of Bromine element and Chlorine element in the external glue of the application products is required to be less than 1500PPM

7.Other points for attention, please refer to our LED user manual.
